

# EPI+ IONIZER

MODERATE TO HEAVY DUTY IONIZER

## description

- Self contained, portable, moderate to heavy duty ion generation and dispersion
- Creates both negative (-) and positive (+) ions with adjustable ratios
- Plugs into standard 120VAC outlet
- Adjustable fan speed control

## applications

- Moderate to heavy ionizer for residential or light commercial applications
- Automotive body shops
- Small woodshops
- Copy rooms

## the technology

The EPI+ effectively reduces particulates and visible smoke, using ion generation. Oppositely charged particles accrue together by electrical attraction. These larger particles are then captured by filters or simply become heavy enough to drop from the breathing air space.

## specifications

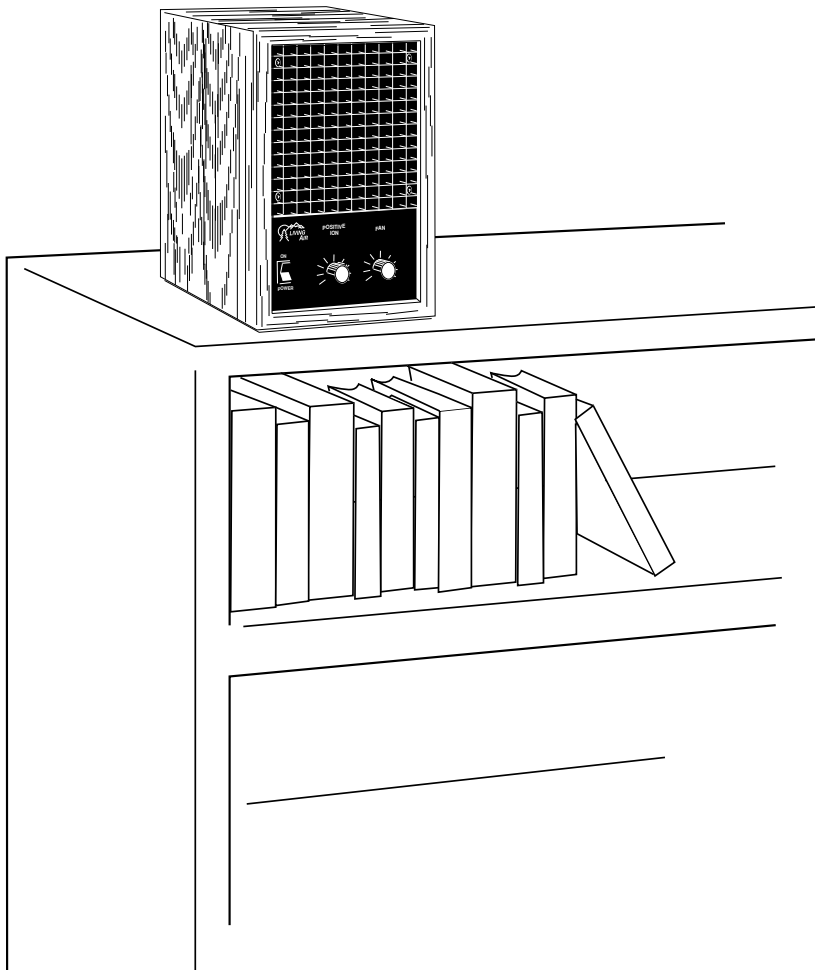

EPI+ IONIZER	US50103	
electrical	120 VAC, .5 amp, 60Hz	30 watts*
mechanical	52 CFM adjustable fan	adjustable neg. (-) and pos. (+) ion control
dimensions	11.75"H x 9.75"D x 8"W	20 cm W x 30 cm H x 25 cm D
weight	21 pounds	9.5 kilograms

The EPI+ Ionizer effectively reduces moderate to heavy particulates and smoke.

## applications list

- Computer Rooms
- Copy Rooms
- Print Shops
- Smoke
- Plastic Operations Areas
- Photo Labs

## installation details

Elevate the unit as much as possible to ensure complete purification. Some pollutants, such as smoke, rise and the unit, when elevated, can more effectively eliminate the pollutant.

The EPI+ Ionizer is most effective when placed in a position that allows the ions to be spread evenly and thoroughly mix with the polluted air. Suggested locations listed in the order of preference:

1. In or near the air stream or current within the room that will best disperse the ions.
2. Nearest the source of the worst pollution.
3. In the area most heavily used to achieve maximum benefit.

For maximum control, the ionizer should be placed where easy access to the controls is possible.

The unit should always be placed at least one inch away from the wall to achieve unrestricted air flow.
